SPRING 2024 DIGGING UPDATE

We have started our spring digging season a little early this year to meet our customer demands for their native tree needs. Eric and his team have been prepping the past few weeks by color-coding trees and orders, wrapping trunks and setting baskets after a winter of pruning they are now happy to be taking advantage of good weather and digging conditions. You can [follow our progress on the news feed](#) on our website.

Even though our [availability](#) is not as

extensive as it has been in the past thanks to good sales and increasing interest in native trees, we still have an excellent selection of hand-crafted native trees including: sugar maples, river birch, pignut hickory, yellowwood, beech, sweetgum, tulip poplar, pin oak and willow oak. Eric is in the field daily, leading the digging team, but [he is still available](#) to answer any of your questions about availability and our quick order processing times so you can get just the right native tree when you need it. There is still time to get the native trees you need for this spring.

You can count on White House Natives knowing that each hands-on step our team takes pride in, contributes to a better native tree that you can rely on to thrive in your landscape. In addition, you have the confidence that each of our trees is locally-grown so you don't have to worry about your native trees having to acclimate from a different climate or soil type. Place your order for a White House Natives tree today so you can see the value and difference a locally-grown, professionally handled native can make in your landscape.

NATIVE OF THE MONTH: *Catalpa speciosa*

As we begin 2024, we start by featuring a tree that was once a common ornamental in rural eastern North America, but has faded in popularity over the decades, the

northern catalpa, *Catalpa*

***speciosa*.** *Catalpa* is a small genus of eight species—all trees—in the liana-heavy trumpet-creeper family, *Bignoniaceæ*. Two of these species are native to North America. The name ‘catalpa’ is derived from the Muscogee name for the tree, *kuhtulpa*, meaning ‘winged head’, a reference to the winged seeds of the tree.
